

A word of advice from your Pool Pro

“YOU NEED MORE THAN SALT”

(you’ll thank us later)

If you started out on the Mineral Springs® system and now are only using plain salt, you’re doing a great disservice to yourself and your pool. In fact, you’re probably costing yourself more money down the road. [Here’s why staying with the Mineral Springs System makes sense...](#)

- **Poor quality salt forces you to use other products to remove undesirable elements.**

Mineral Springs uses only highly refined minerals, free of impurities.

- **Saline chlorination creates a high pH environment.**

Mineral Springs has ingredients that help offset pH drift.

- **Sunlight naturally breaks down any free available chlorine.**

Mineral Springs contains a stabilizer to extend the germ-killing life of the chlorine.

- **Chlorine generator cells tend to scale.**

Mineral Springs adds a sequestrant and scale inhibitor to prolong the life of the cell and protect your equipment.

- **Extra benefits add to your pleasure.**

Plus, Mineral Springs contains a filter aid and clarifier that help maintain sparkling, clear water and a scented fragrance that make adding product more pleasurable.

	Mineral Springs® Renewal®	Salt
Source of Chlorine	Refined Minerals	Unrefined Salts
Water Softeners	√	
pH Balancers and Adjusters	√	
Chlorine Stabilizer	√	
Sequestrant and scale inhibitor	√	
Filter aid and clarifier	√	
Scented fragrance	√	

Stay with the system – you’ll love the results.
(you’re welcome for the advice)
